

SANIPURE SANITIZATION SYSTEMS

CERTIFIED TECHNOLOGY

SANITIZED AIR

Sanitation of indoor air

UV-C TECHNOLOGY

Delete Virus
99% mold and bacteria

SAFETY

It can be used in the presence of people

MADE IN ITALY

5 year guarantee

OZONE

Surface treatment with O3 in the absence of people

EFFECTIVE
99%
REDUCE
BACTERIA
VIRUS (COVID-19)
POLLEN-MITES
SMELLS

MEDICAL SECTOR

COMMERCIAL

OFFICES

Sanipure professional systems are specially designed to convert oxygen into ozone for the sanitization of commercial environments such as shops, offices, medical offices.

Pure Compact installed in the environment and guarantees a complete inactivation of viral forms, microorganisms, and the elimination of toxic, harmful, organic and inorganic residues in the air which on all surfaces.

The diurnal action of the **UV-C lamp** (photocatalytic oxidazone) and nocturnal through **Ozone** (in the absence of people) ensures complete sanitization. It leaves no residue or stains.

- Does not damage the materials
- UV lamps work well constant and continuous for a sterilization of the air 24/24 h
- Elimination of bad smells
- Reduction of pollen and allergens
- 5 year warranty
- There are no operating costs
- Management via APP

PURE COMPACT

Structure: Metal with anti-corrosion treatment
Ozone production: 30 gr / h
Air Flow: 150 m³/h
Germicidal lamp: high efficiency UV-C type
Power supply: 110/230 V - 50/60 Hz
Installed power: 50 W
Management: via App or reote control
Dimensions: 56x20x26 cm
Ambient temperature for use: + 4 °C / + 40 °C

The integrated UV-C lamp eliminates germs, bacteria, pollen and virus from air

Ozone disinfects the surfaces

Reduces charges viral (COVID-19) up to 99%

It is generally acknowledged that Ozone saturation will kill almost all viruses including Covid 19, Influenza and harmful bacteria, and even small insects and bugs. The problem to date is that in high concentrations it also interferes with any creature who needs oxygen to survive so saturating a room to disinfect it could only be made happen at night when there is no human in the room. Ozone is a noble gas so it decays rapidly so after a room saturation it will clear in a few hours but switching on and off an Ozone generator should be done remotely so as to be safe. Until now,

The **Pure Compact Sanitizer** is designed to be an automatic Ozone generator operated from an App on your phone and/or tablet which allows you to set it to come on automatically each or all nights you choose at a time when the room is unoccupied and then automatically switch off in plenty of time to allow the Ozone to decay, having completely sanitized a room up to 150 cubic metres in volume.

However that is only one third of the **Pure Compact** Story. The **Pure Compact** is designed to run continuously all day every day and when the Ozone generator is not operating it uses a UV-C lamp (photocatalytic oxidazone) to filter and circulate the air in the room which guarantees a complete inactivation of viral forms, microorganisms, and the elimination of toxic, harmful, organic and inorganic residues from the air.

Sanipure professional systems are specially designed to convert oxygen into ozone for the sanitization of commercial environments such as shops, offices, dental & medical offices. **Pure Compact** when installed in the environment guarantees a complete inactivation of viral forms, microorganisms, and the elimination of toxic, harmful, organic and inorganic residues in the air. The diurnal action of the UV-C lamp (photocatalytic oxidazone) and nocturnal through Ozone (in the absence of people) ensures complete sanitization. It leaves no residue or stains. • Does not damage materials • UV lamps work well & constant and continuous for a sterilization of the air 24/24 h • It also eliminates unpleasant odours and reduces airborne pollen and allergens • 5 year warranty • There are no operating costs except a small usage of electricity • Management via APP to suit each individual operation.

The **Pure Compact Sanitizer** is available from Triace Ltd either to purchase or to rent monthly and should be a consideration for any premises in which footfall occurs on a daily basis.

Please search for **Pure Compact** on Youtube for further details and some case studies.
